Standard installation specification

- 1x Intelligent EV Charging Unit
- 1x Rolec 2mod metal clad mini consumer unit with Type A RCBO
- A maximum cable run of 10 metres from source of supply (consumer unit) to charge point
- The property's consumer unit must include sufficient RCD protection and have a spare empty slot to allow for the installation of an electrical protection device at source
- Cable to be surface mounted - clipped direct
- No ground works
- The prices listed above are subject to site survey/site conditions/location of property/location of chargepoint and your chosen electrical contractors Ts & Cs

Additional costs

To be negotiated prior to installation between the home owner and installer

The following information provides a guideline of work that is considered to be beyond the standard installation specification:

- Cable runs exceeding 10 metres (chargeable per metre thereafter)
- The necessity to install a mini consumer unit with overload and fault current protection due to:
 - a) the property's consumer unit having insufficient capacity/protection for the chargepoint circuit
 - b) the homeowner wishing to have an independent chargepoint circuit protection from the home's consumer unit
- Any additional mechanical protection required for the cabling - i.e. trunking, conduit, etc.
- Any cable chasing requested by the homeowner
- Any ground works requested by the homeowner
- Any other works required on site in order for the installation to comply with regulations
- Any additional or unusual works requested by the homeowner in order for the install to take place, i.e. gas and water pipe bonding, equipment clearing, plumbing work, etc.

Please note:

- Removal of the serial number from the unit will invalidate the warranty on the product
- GPRS - Recommended signal strength of 14 CSQ or above
- All installations must comply with current IET Wiring Regulations
